

Nub® System

The NUB® The revolutionary friction block:

*The **Nub®**: A new spherical friction pulley which is not afraid of taking heavy loads.*

*At 16 grams the **Nub®** is capable of holding more than four tons of static weight. Already equipping a number prototype racing boats, at an unbeatable price – can it get much better?*

***Michel Sauget** and **Francois Angoulvant** the designers well known throughout the yachting world have joined forces with **Grément Courant S.A** (French for “Running Rigging”) at Morges, Switzerland, a company specializing in designing cutting edge technical solutions and textiles for racing yachts worldwide.*

At 16 grams the **Nub®** is a new spherical pulley which is not afraid of taking heavy loads. During testing, the 10mm Dyneema rope snapped before the **Nub®** showed any signs of strain - the load was 4.7 tones. This was not surprising considering the strength of the polyplastic materials used to produce the **Nub®**.

The other benefits of the **Nub®**, compared to standard pulleys, go without saying : small size, low friction and lightweight design.

A very secure design: The **Nub®** innovative design means the moving sheet moves through the static sheet resulting in absolute security and a secondary defense.

Its uses: The **Nub®** is fully adaptable to all areas on the boat and can be operated - but not limited - for runners, backstays, barber-haulers, inhauler, and even shrouds connections. Unlike many other pulleys or friction rings, the **Nub®** can be fixed to a preloaded rope, or with a simple lashing.

An original design : your deck will have a lean look !

Louis Heckly and Bill Leclerc from Grément Courant S.A, key preparators for TP52's and many other internationally renowned racing yachts, always have Nubs® at hand to manage the unexpected. Their enthusiasm inspired the inventors to create and market this revolutionary new pulley in a fast evolving market: **Michel Sauget** of Delta Sails in La Trinité and **Francois Angoulvant** (president of Class40 Association) has equipped his Sabrosa 40 RC2 (Route du Rhum) with 18 Nub's®.

Standing Rope Diameter: 12mm. max.
Running Rope Diameter: 10mm. max.

We hope to see you during the Paris Boat Show! You can find us at the Yacht Club de France booth, **Hall 1 - K79** , Friday 5th of December at 2:00 p.m. for the unveiling and presentation of our new and revolutionary product.

Price: €39.90 for two units.
